 - While it is easy to duplicate copyrighted electronic (or digital) content, computer ethics would suggest that it is wrong to do so without the author's approval.
 - While it may be possible to access someone's personal information on a computer system, computer ethics would advise that such an action is unethical.

Ten Commandments of Computer Ethics

- The **Ten Commandments of Computer Ethics** were created in 1992 by the *Computer Ethics Institute* to provide "a set of standards to guide and instruct people in the ethical use of computers."
- Widely quoted in computer ethics literature, but also have been criticized to be simplistic and overly restrictive.
